

Novelty / coverage analysis — generated vs held-out test

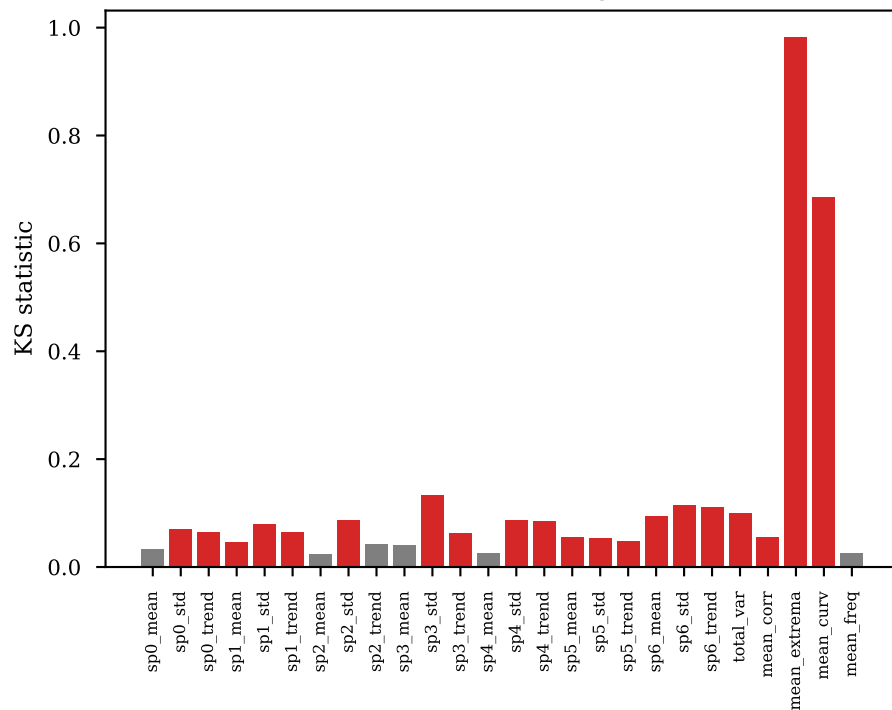

A) MMD permutation test — $p = 0.0020$

B) Density / coverage (k=5)

C) Per-feature KS test (20/26 significant $p < 0.05$)

VERDICT

Distributions DIFFER significantly ($p < 0.01$).

```

N per group      : 2000
feature dim      : 26
MMD² obs / null mean : 0.0677 / 0.0000
MMD permutation p   : 0.0020

density@5 : 0.135  (≥1 = generated covers real well)
coverage@5 : 0.246  (1 = every real has a gen neighbor)

features distinguishing real vs gen: 20/26
